

DOUBLE VACUUM

COMPOSITE DEBULKING CHAMBER

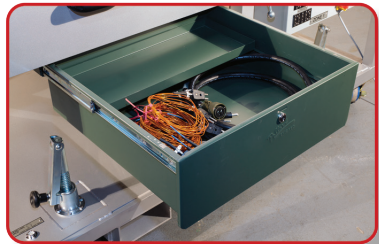

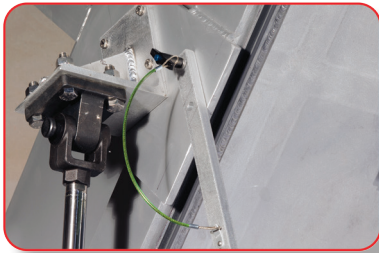

The HCS7600 series DVD Chamber is a custom designed, double vacuum, debulking chamber used for pre-curing composite repair patches resulting in a near-autoclave quality repair. DVD Chamber operation is an operator and/or repair-specific combination of traditional Hot Bonder controlled heat and bag-vacuum with operator controlled chamber vacuum. The DVD Chamber is capable of holding -28in hg vacuum over an extended period of time and is adjustable via facility supplied vacuum regulation.
